DETAILED ACTION

1. This office action is responsive to the Terminal Disclaimer filed on August 08, 2007. The double patenting rejection is withdrawn and the new rejection is based on the newly cited reference.

Claim Rejections - 35 USC § 112

2. Claim 26 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 26, line 5, the recitation "positioning a plurality of conductive loops of an antenna the selected distance D apart" is not clear. Does applicant mean "positioning a plurality of conductive loops of an antenna having the selected distance D apart"?

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 26, 29-31, and 33 are rejected under 35 U.S.C. 102(e) as being anticipated by Moore (US Patent 6,714,121).

Moore discloses, in figures 1A, 1B, a RFID system comprising a RFID tag having a dimension, a loop antenna formed on a printed circuit board, and having a plurality of

conductive concentric loops spaced a part by a distance. The electrical coupled to the loop antenna to produce current is inherent.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 32, 34, and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moore in view of Kunz (6,127,989), cited before.

The patent to Moore, described above, differs from the claimed invention because it does not disclose a conductive shield around the antenna. Kunz discloses, in figure 2, an integrated circuit and antenna coil, and a conductive shield 20 around the antenna coil. It would have been obvious to provide the loop antenna of Moore with a conductive shield for the purpose of protecting the antenna device against mechanical stress or corrosion as taught by Kuntz, see column 1, lines 42-56. Regarding claim 32, a tuning circuit for tuning the antenna system is well known in the art, and therefore it represents an obvious expedient.

Allowable Subject Matter

Claims 1, 4-15, 18-25 allowed.

Claim 27 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
